

Motorola Mototrbo

With Motorola's Mototrbo analog/digital radio systems, you will enjoy better performance, productivity and value. Because of digital technology, Mototrbo delivers double the capacity, improved audio clarity, 40% longer battery life and integrated data applications. And with their rugged design, Mototrbo is an obvious choice for underground communication systems.

Motrtrbo Features:

- **Crystal Clear Communications:** Digital voice gives you clear, crisp audio every time. Plus, each radio is equipped with built in noise and static rejection so background noise will no longer be a problem
- **Double Capacity:** Each Mototrbo repeater has two channel capabilities. This means one digital does the work of two analog repeaters; cutting your equipped needs in half, in turn cutting costs
- **Analog/Digital:** Radios are capable of both analog and digital transmissions giving you a clear migration path to digital as not an entire fleet will need to be replaced at once. Instead, new Mototrbo radios will work with existing systems and later can be switched to digital
- **Increased Call Features:** Make one-to-one, one-to-many, or one-to-all calls
- **Rugged:** Meets IP57 requirements for submersibility, Military specs 810 C,D,E & F and is Intrinsically Safe
- **Impres Technology:** Portable radios come standard with an Impres battery and charger/re-conditioner. This is a smart battery and charger system that actually reconditions batteries as they charge, providing a 40% better lifespan over conventional batteries.
- **Messaging:** Send text messages via radio. Messaging applications can be purchased that give you the ability to send and receive emails on radio
- **Networking:** Mototrbo repeaters come with Ethernet port, giving you the ability to tie the radio system into a network.
